

Your Crawl Space Moisture Controlled!

ATMOX.COM

704-248-2858

Identify your crawl space concerns

- Have crawl space odors invaded your living space?
- Are your allergies worse inside your home?
- Is mold impacting your crawl space?
- Do you have hardwood flooring issues?
- Have you been told you have termite or other pest damage?
- Has foundation wood rot become visible?
- Are you using or considering a dehumidifier for your crawl space?

Winning Formula for Your Crawl Space

MOISTURE CONTROL – Use drying options to protect the foundation of your home.

AIR QUALITY – Create a healthy home with improved air quality.

ENERGY EFFICIENCY – Optimize energy use through the management of related components.

NOTIFICATIONS & ALERTS – Know the conditions in your crawl space and receive alerts for potential issues.

DISTRIBUTED AIRFLOW – Bring drying to all areas of the crawl space.

Your moisture solution starts with an ATMOX Controller

Bring the **ATMOX Advantage** to your home with fully-automated technology designed specifically for your crawl space. Let the controller work its magic using sensors and sophisticated software programmed to operate selected components. Your installer will assist you in determining your solution – not all options are used in every crawl space.

Pair the following choices with an ATMOX controller to maximize your moisture solution.

INFORMATION

View your conditions and current operation

The ATMOX display provides information directly to you. You will receive constant real-time information from highly accurate sensors on the conditions in your crawl space such as temperature, humidity and dew point. Responsive alerts provide notifications for any potential issues.

- Provide information on conditions of structure with real-time wood moisture sensor
- Alert for water detection at a sump or condensate pump
- Alert for potential moisture issues through high wood moisture or elevated relative humidity

DEHUMIDIFICATION

Target your humidity with on-command moisture control

Dehumidifiers are powerful tools for drying a crawl space and especially effective in warm temperatures.

- Control the use of one or more dehumidifiers of most brands and models
- Use highly accurate humidity sensor separate from dehumidifier unit
- Avoid freeze ups and damage by only operating during designed temperature range
- Extend the life of dehumidifier by limiting excessive on/off cycling
- Adjust target humidity directly from the display

VENTILATION

Improve your air quality and energy efficiency through effective moisture control

Ventilation fans that are properly controlled allow for targeted air exchanges to improve the conditions within the crawl space.

- AIR QUALITY**
 - Dispel odors, toxins and material off-gasses to the outdoors with fresh air replacement
 - Exchange air for true quality improvement as compared to filtration alone
 - Allow for timed ventilation for consistent air exchange

- MOISTURE CONTROL**
 - Use sophisticated logic in software to improve conditions through ventilation only when beneficial
 - Compare moisture levels through a dew point comparison to dry effectively when outside air is drier
 - Use air during cooler, dry seasons and select climates

- ENERGY EFFICIENCY**
 - Decrease energy consumption by reducing the use of the dehumidifier
 - Extend life of the dehumidifier with its decreased operational need

CIRCULATION

Address your entire crawl space

Circulation fans used internally are an important contributor to creating distributed airflow throughout the crawl space to dry more evenly.

- Improve dehumidifier reach, effectiveness, and efficiency by moving air to and from far corners
- Create airflow within tight or low spaces
- Move air between areas of compartmentalized crawl spaces
- Circulate air to avoid stagnant air and balance temperature

ILLUMINATION

Inspect your crawl space easily

LED lights are a terrific addition to provide easy visual inspections for you and your home service providers.

- Turn lights on and off directly from display
- Have automatic timed shutoff

About ATMOX®

ATMOX is the creator, developer and manufacturer of controlled, monitoring and complementary products for a building's unconditioned spaces with a focus on moisture control and heat reduction. Energy efficiency and air quality are at the forefront of all product development.

ATMOX sells solutions that are wrapped up in boxes and shipped as products. Every ATMOX product is always designed to solve a problem and improve the home.

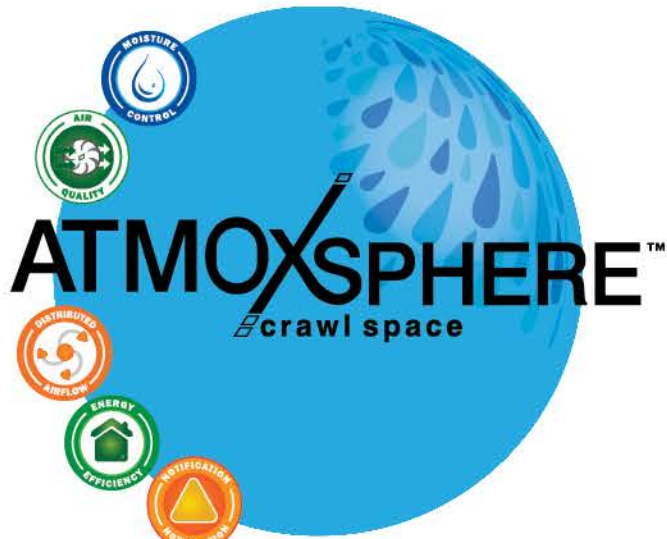

For over 25 years, the company has been continuously focused on the improvement of crawl space and attic moisture solutions. Product development and improvements are continuous as technology advances.

About Our Products

The ATMOX name originates from a derivation of the word atmosphere. The ATMOX products are always designed to create the best atmospheric or should we say ATMOXspheric conditions.

The ATMOXsphere is about giving the best environment to your unfinished space and ultimately your home. There are many different ATMOX products to incorporate depending on your needs and issues – every home will benefit from an ATMOXsphere. You may need it to remedy existing moisture issues or to prevent them from occurring at all.

All ATMOX products are backed by a limited three-year product warranty. For more information on ATMOX products, please visit www.atmox.com.
